G406s Dual channel controller

GeoBox G406s is simplified version of G406L Video Wall controller. It incorporates 1x HDMI 2.0 input and 1x HDMI 2.0 loop out port to support up to DCi/UHD 60 fps input signal as well as two synchronized Full HD outputs. Each output has independent image rotation/flip, scaling, cropping and color adjustment to allow great freedom in creating overlap pixels for projector edge blending and any scale video wall.

It is pure hardware, standalone system with easy-of-use. All operations can be implemented through IR remote controller, USB, RS232 or Ethernet. No additional PC or appropriate software tool is required.

Infinite creative configuration

- ✧ 1x HDMI 2.0 input, 2x HDMI 1.4 output up to 2048x1080 @60Hz with flexible multi-unit cascade.
- ✧ Support up to 4096x2160@60Hz, 7680x1200 @30Hz input.
- ✧ Input supports HDCP 1.4/2.2 and output supports HDCP 1.4.
- ✧ One Loop-through port for multiple unit cascade in any scale display.
- ✧ Pixel base position alignment up to ± 1800 pixels in H&V for flexible image capture, cropping, position alignment, bezel compensation & irregular video wall.
- ✧ Set overlap output up to 1800 pixels for projector edge blending application.
- ✧ Decode 3D signal for RH/LH eye frames for passive 3D display.
- ✧ Independent Image color adjustment in each channel.
- ✧ Independent image rotation and flip/mirror in each channel for variable landscape, portrait and irregular video wall display.
- ✧ Selectable output resolution and programmable EDID to optimize video quality.
- ✧ Flexible aspect ratio adjustment in each edge up to ± 1800 pixels.
- ✧ Frame rate conversion and 50Hz in / 50Hz out to keep video quality without artifact.
- ✧ Frame-Lock function to get perfect synchronization among output channels.
- ✧ Green product with low power consumption--only 6.6w.
- ✧ Easy setup via IR, USB, RS232 & Ethernet. No PC is required.
- ✧ Ready for 24/7 working environment.

Application examples

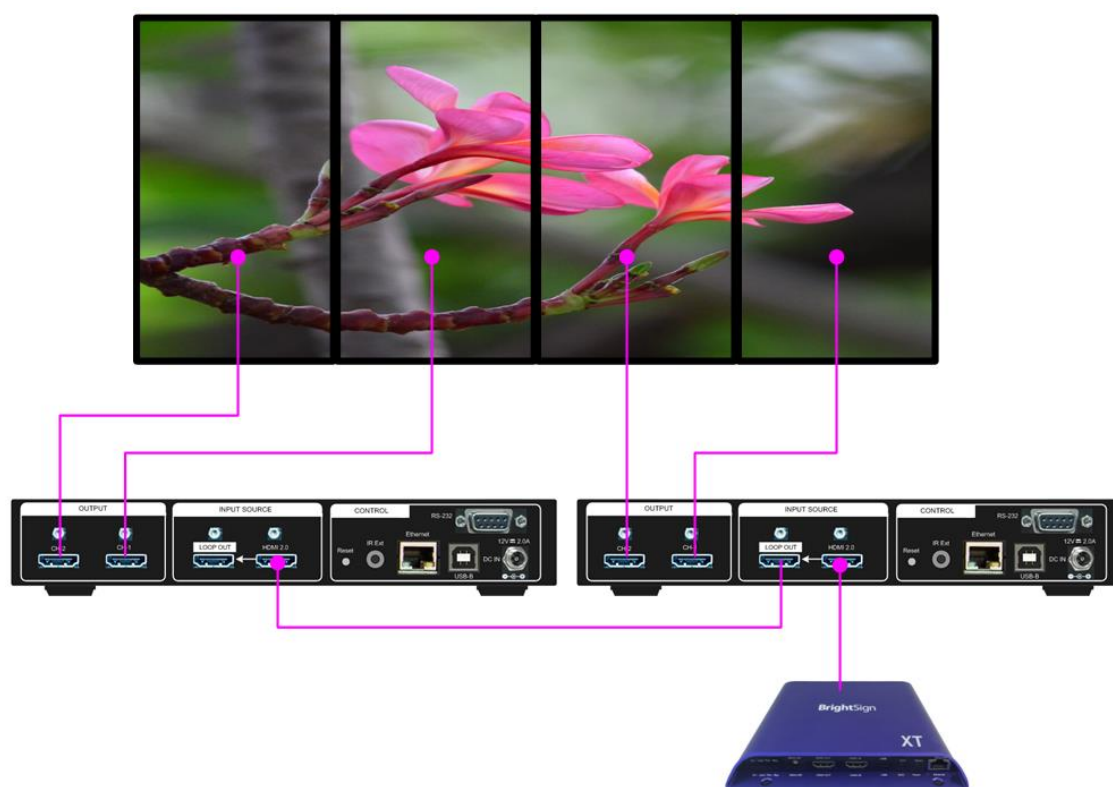

A. Video wall

B. Irregular video wall

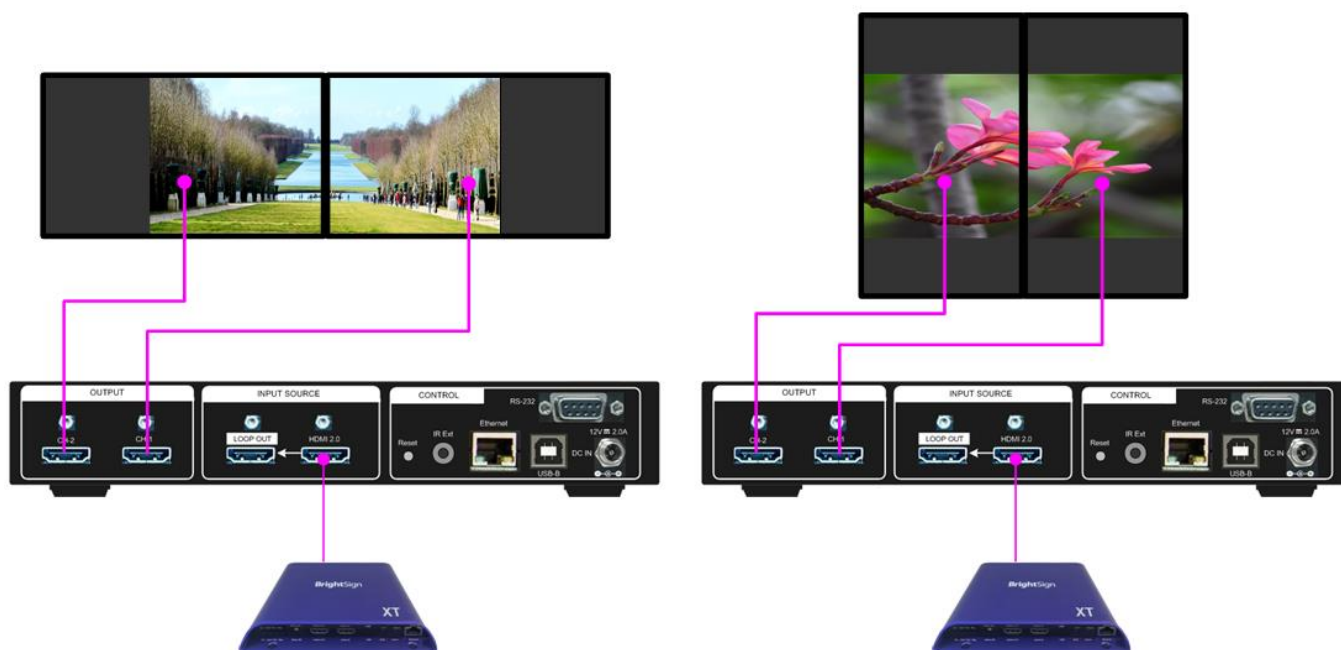

C. Multiple G406s daisy chain connection

D. Flexible aspect ratio adjustment

The background color can be either black or blue color.

E. Split source image and set overlap pixel for projector edge blending

Two outputs from G406s with
redundant pixels in overlap area

Projected images are overlapped
and blended by projectors

After projector
edge blending,
resulting seamless
image

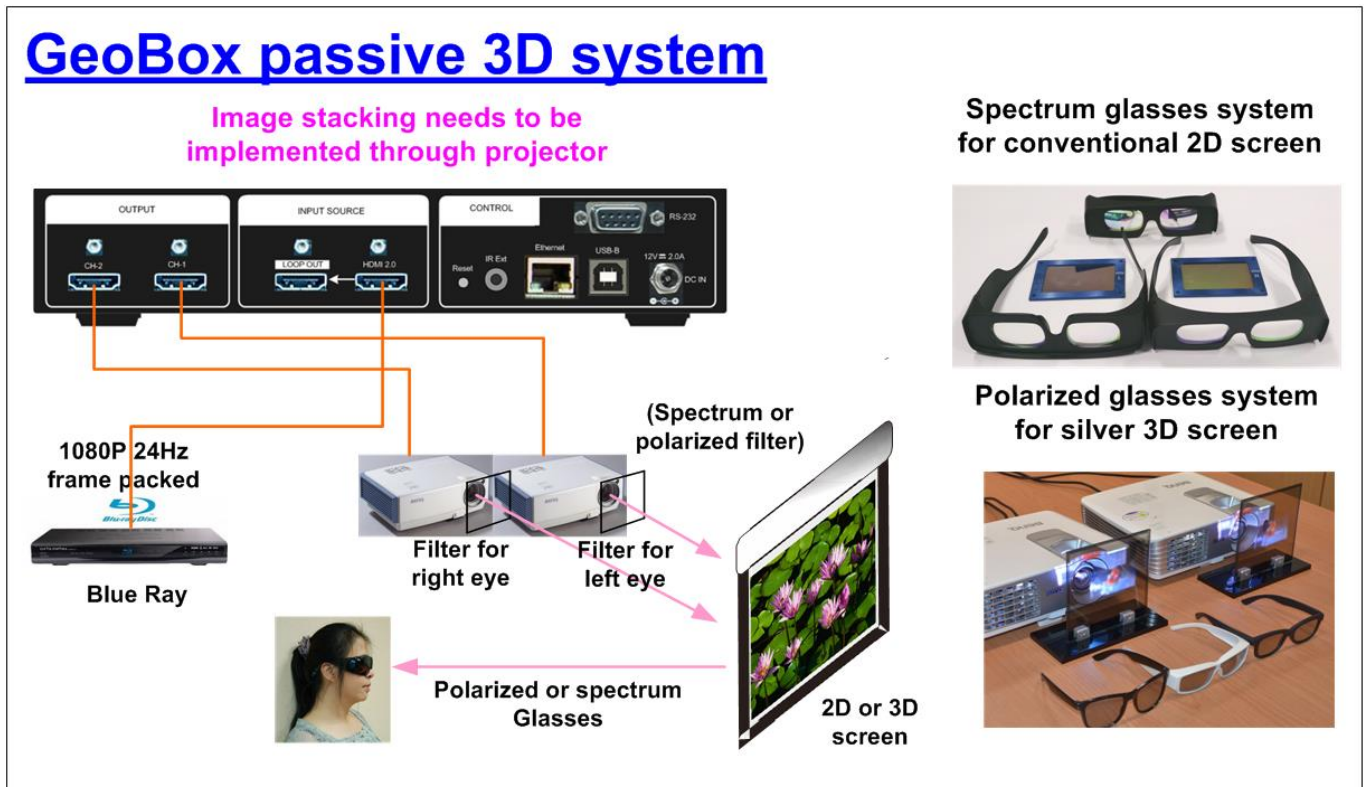

G406s can split image and
set overlap for projector
edge blending

F. Passive 3D

G406s can decoded side by side, Top/Bottom and frame packed 3D from DVD player into RH/LH eye frames for passive 3D display. User needs to do image stacking through projector warp function.
