FP Series Install Instructions For:

FP-Light |Light Settings and Controls

Module Description

The LED light can operate as a standard light fixture or can be triggered with the FP-Motion module. Brightness can be controlled either internally with an adjustment on the FP-Light module or externally with a global system controller. To trigger the FP-Light with the FP-Motion, refer to Section 3 and the FP-Motion installation instructions.

Section 1 – Wiring The <u>Speaker</u>

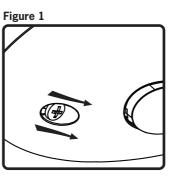

Connecting The External Power Supply

The FP-Light requires an external power supply rated between 12 V and 18 V (optional SoundTube accessories: AC-PS-1530 and AC-PS-1550). Connect the power supply to the brown/white (+) and brown (-) wires in the Cat 5 cable.

Section 2 – Adjusting the **Brightness**

Remove The Pod Cover

Remove the pod cover [1] from the FP pod [2] by loosening the two captured screws [3] on each side (Figure 1). The screws will not come out of the cover.

Adjust The Brightness Internally To manually adjust the

brightness of the light use a small screwdriver to turn the trim pot on the upper right corner of the light module [6]. Turning the trim pot clockwise must be installed. will increase brightness and counterclockwise will decrease brightness.

Adjust The Brightness Externally

is disabled by factory default. To enable the external brightness control, move Jumper 4 [4] on the upper left corner of the FP Light module to the enabled position over the two right pins (Figure 2).

Figure 2

To adjust the brightness externally, incorporate a controller such as Crestron or Pod Cover Lutron and connect the positive lead [+] from the Replace pod cover [1] and controller to the orange/white tighten screws [3]. wire in the Cat 5. and the negative lead [-] from the controller to the orange wire in the Cat 5. The Light module accepts 0 V to 10 V DC signal to control the brightness. **To** achieve maximum brightness, the trim pot must be turned fully clockwise (see previous step).

Section 3 – Motion Sensor Triggering

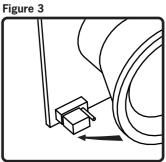

Enable The Motion Sensor Note: To use with motion triggering, both the FP-Light and the FP-Motion modules

Since motion sensing is disabled by factory default, the light will be on continuously when power is supplied. To enable motion sensor The external brightness control triggering of the light, move

> Jumper 2 [5] on the lower left corner of the FP-Light module to the two left pins (Figure 3). When this feature is enabled, the light will only activate when motion is detected. See FP-Motion sensor instructions

for settings and controls.

Section 4 – Replacing The
